

ORACLE / JAVA / AION DEVELOPER
Health Insurance BC
MAXIMUS BC Health, Inc.
Victoria, BC
Regular/Full-Time

MAXIMUS Canada has an immediate need for all levels of application developers.

You will participate in all phases of the software development life cycle (SDLC) including maintenance and support activities. You will need to design and develop solutions using Oracle, Java, or AION application development tools to deliver applications that address business requirements.

The Application Developer is responsible for application maintenance, production systems support, designing and developing solutions, and delivering applications that address business requirements. The Application Developer participates in all phases of the software development life cycle (SDLC) and may work independently on small application releases or as part of a project team on larger application releases.

You will be required to critically analyze application and architecture requirements, and to devise sound solutions that address business challenges using MAXIMUS BC methodologies, data quality principles, and industry standards. You will be responsible for developing project plans, logical and physical design specifications, architecture diagrams, executable code, and unit / integration test plans.

You are expected to have a Bachelor's degree from an accredited college or university, with major coursework in information systems, computer science or a related field, with three to five years' experience successfully developing and supporting enterprise applications, OR an equivalent combination of education and experience.

Experience with J2EE, Java, Oracle PL/SQL, XML, HTML, AION, or other rules engines is required. Prior experience with HL7 messaging, health insurance or pharmacy industry, or the application landscape that supports the British Columbia Ministry of Health is highly desirable but not required.

To be the successful candidate, you must be self motivated and willing to learn, and be able to perform comfortably in a fast-paced, team- and deliverables-oriented work environment. You must possess good organizational, interpersonal and communication skills and be sensitive to deadlines and to the impact your work has on an overall project schedule. Experience defining architectural standards, selecting development tools, and driving organization improvements is a big plus.

The successful candidate will be a problem solver who is able to step up and take initiative and to methodically analyze and resolve programming challenges. You must also be comfortable seeking peer and supervisory guidance on complex application challenges. You must possess a desire to learn, to adopt new technologies and languages, to keep abreast of new technologies, and to improve your technical skills through ongoing research and development activities.

Salary will be commensurate with experience and qualifications.

We thank all applicants for their interest, but only those short listed will be contacted.
